Work Plan SwissMADE 2021

There remain a few open work packages in the SwissMADE project, which I suggest I work on between 1.4 and 31.8.

Work Packages

- **WP1**: transfer of structured and unstructured data from USZ to Lausanne. This hopefully can be done even before the 1.4, but the experience so far has been one of delays of legal departments and unexpected obstacles.
- **WP2**: fixing encoding errors in the unstructured data from USZ and possibly KSB. This is not strictly necessary, but in the USZ data, some umlauts are not encoded correctly, which could tip off the pipeline and make comparison to other data sets difficult. Since the encording does not seem to be consistent, this is not quite as simple as it sounds.
- **WP3**: running the UZH pipeline on the KSB data, and creating annotation samples according to the same rules as for the USZ data.
- **WP4**: evaluation of the UZH pipeline using the manual annotations from KSB.
- **WP5**: summarizing the results and lessons learned from the project, which we have already previously already discussed, either to share with other partners or to use as the basis for a follow-up project.

Roadmap

In the roadmap below I listed how long I estimate each WP to take and in which order I would suggest to proceed.

Work Package	...	April		May		June		July		August	
WP1											
WP2											
WP3											
WP4											
WP5
